New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinase activity, e.g. immune, metabolic, inflammatory and neurological disorders.

Claim 5; Page 29; 473pp; English.

The invention describes an isolated nucleic acid molecule (I) encoding metalloprotease (MP-1). (I) is useful for preventing, treating, or

The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia); metabolic disorders (e.g. premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, Huntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis or sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This is the amino acid sequence of a metalloprotease MP1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Metalloprotease; MP-1; immune disorder; glutamate transport; cancer; motor neuron disorder; amyotrophic lateral sclerosis; ALS; diabetes; reproductive disorder; Kleinfelter's syndrome; germinal cell aplasia; genital wart; metabolic disorder; premature puberty; Kallman syndrome; cushing's syndrome; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; Huntington's disease; Tourette syndrome; sepsis; liver disease; renal disease; immune disorder setumatoid arthritis; acquired immunodeficiency syndrome; AIDS; pulmonary disease; pneumonis emphysema; cystic fibrosis; vascular disorder; inflammatory disorder; neurological disorder.

(I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an aberrant glutamate transport or motor neuron disorder, such as amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, huntington's disease or Tourette syndrome), liver and creat diseases and immune disorders (e.g. AlBS, rheumatoid arthritis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents human O-sialoglycoproteinase-like protein (OSGPLP). The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the OSGPLP protein; and (5) the use of the OSGPLP polynucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-MAY-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             O-sialogycoproteinase-like for diagnosing, preventing

                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated polypeptide comprising: any of 28 cc sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acids sequences, 94% identical to a sequence of 703 or 267 amino acids, 96% identical to a sequence of 414 amino cc acids, or 97% identical to a sequence of 414 amino cc the specification; or a biologically active or immunogenic fragment of cc in diagnosing, treating and preventing diseases or conditions associated with the decreased expression of protein modification and maintenance cmolecules (PMOD), such as cell proliferative diseases (e.g. AIDS, callergies), neurological disorders (e.g. stroke, Parkinson's disease, celibraby), gastrointestinal (e.g. ulcer, cirrhosis), reproductive (e.g. cendenctriosis), developmental, vesicle trafficking disorders, and confections (e.g. bacterial, viral, parasitic, protozoal). These are also consecuted in assessing the effects of exogenous compounds on the expression cf fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring coffice invention profiles. This sequence represents a human PMOD protein for the invention.
                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel 38650, 28472, 5495, 65507, 81588 CC or 14354 nucleic acid molecules which encode adenosine deaminase, glyco-cc protease or seven transmembrane domain (7TM) receptor family members. CC Sequences of the invention are useful in diagnosing and treating cancer (or aberrant cellular proliferation and/or differentiation (e.g. colon or CC lung cancer), immune disorders (e.g. selective IgA deficiency, rheumatoid CC arthritis, diabetes, allergy), heart or cardiovascular disorders (e.g., composardial infarction, thrombus) including endothelial cell disorders (e.g., psoriasis, Grave's disease), haematopoietic disorders, brain CC (e.g., psoriasis, Grave's disease), haematopoietic disorders, brain CC disorders (e.g., cerebral oedema, Parkinson's or Alzheimer's disease), codisorders (e.g., diagnostic disorders (e.g., obesity), liver disorders or platelet CC disorders. They are also useful in sorcening assays, predictive medicine CC (e.g., diagnostic assays, prospective and therapeutic methods. The CC and pharmacogenetics) and prophylactic and therapeutic methods. The CC consolid may also be used in chromosome mapping, tissue typing and CC calso used in gene therapy. The present sequences of the invention are CC also used in gene therapy. The present sequence is human glycoprotease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes isolated 38650, 28472, 5495, 65507, 81588 and CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The CS 38550 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding comprises a sequence encoding adenosine CC sequences that encode a human seven transmembrane domain (7TM). The CS 38550, 28472, 5495, 65507, 81588 and 14354 comprise CC sequences are useful for diagnosing, preventing or treating a subject CC with or at risk of developing a disorder, e.g. cancer or aberrant CC cellular proliferation and/or differentiation (e.g. breast, ovarian, CC prostate, colon or lung cancer), immune disorders, heart disorders, cardiovascular disorders, endothelial disorders, heart disorders, brain disorders, pain and metabolic disorders, CC liver disorders or platelet disorders. These disorders include carcinoma, CC sarcoma, leukaemia, Hodgkin's disease, autoimmune disorders, for ischaemic heart disease, Crohn's disease, Grave's disease, Kawasaki CC syndrome, Raynaud's disease, aneurysm, cerebral ischaemia, peripheral CC cachexia or diabetes. This is the amino acid sequence of the novel human CC cachexia or diabetes. This is the amino acid sequence of the novel human CC carbon or diabetes. This is the amino acid sequence of the novel human CC carbon or diabetes. This is the amino acid sequence of the novel human CC carbon or diabetes. This is the amino acid sequence of the novel human CC carbon or diabetes. This is the amino acid sequence of the novel human CC carbon or diabetes. This is the amino acid sequence of the novel human CC carbon or diabetes.

                                                                                                                                   CC The invention relates to an isolated 38650 (encoding adenosine CC deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7 cC transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or CC tasequence which is at least 60% identical to the six nucleic acids or CC their open reading frames, fragments of at least 15 nucleotides, CC naturally occurring variants, or a DNA insert of the plasmid deposited CC with the American Type Culture Collection as Accession No. not defined in CC the specification, which encodes the amino acid sequence). Also included CC are a host cell containing the nucleic acids (used to produce the CC the polypeptide, and identifying a compound that binds to/modulates the CC activity of the polypeptide. The nucleic acid molecules, polypeptides and CC methods are useful for diagnosing, treating cancer, aberrant cellular CC proliferation and/or differentiation, immune disorders, heart disorders, CC cardiovascular disorders including endothelial cell disorders, pain and metabolic disorders, liver disorders and platelet disorders (many CC examples of these disorders are given in the specification). The present

                                                                                                                                                                                                                         The present invention relates to novel human secretory or membrane proteins (ADA54712-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                             New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                        Isogai T, Sugiyama T,

The inventior useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL016175) and the enco-deligation (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                               Proteins AAY52202-Y52217 encompass a novel family of proteins designated the ygjD family, after the name given to the Escherichia coli family member. These proteins are essential for the survival of both Gram negative and Gram positive bacteria, although no function has as yet been ascribed to these proteins. The ygjD proteins, fragments of ygjD proteins (for example, fragments encompassing one or more conserved ygjD motifs such as AAY52218-Y52284) and nucleotides encoding them can be used to identify antagonists and broad spectrum antibacterial compounds. These antagonists and compounds can be used to treat a wide range of bacterial infections. New antibiotics are urgently needed, as serious bacterial infections and antibiotic resistant strains are becoming increasingly prevalent. The proteins of the invention are essential proteins for bacterial viability, and represent new targets for antibiotics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ygjD protein; essential; Gram positive; Gram negative; conserved; motif; identification; antagonist; antibacterial; antibiotic; broad spectrum; treatment; infection; resistance; drug target.

```
RESULT 15
ABU35232
   the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(C) if we vector comprising a promoter operably linked to the nucleic acid cenciding a polypeptide whose expression is inhibited by the antisense concleic acid; (4) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the cantisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a gene in an operon required for consideration, or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of the strains; or (13) identifying the target of a compound that inhibits the collular proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, crequired for proliferation in cells other than S. aureus, S. typhimurium, crequired for proliferation of the printed specification, but was obtained in electronic format directly from WIPO at

   the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense comprising the vector; (3) an isolated concleic acid; (4) a host cell containing the vector; (3) an isolated continuously peptide or its fragment whose expression is inhibited by the cartivity of an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway for the gene product or that has an activity against a biological pathway of a gene or its gene product or that has an activity against a proliferation of the biological pathway in which a proliferation, or that inhibits cellular proliferation of an compound that inhibits proliferation of an compound's activity; (11) a culture comprising strains in which the gene conduct is overexpressed or underexpressed; (12) determining the extent convolute activity and inhibits are useful for cellular proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational conduction of for cellular proliferation of conduction of a contract processed.

  drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

:::|||||:::||||:::||
   BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, from a library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from limbs, normalised, and poly A-trimmed. EcoRI.NotI cut cDNA was then ligated into the vector: Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host: Escherichia coli DH10B.
   Submitted (29-MAR 2004) Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: chickest@bms.umist.ac.uk
On Apr 1, 2004 this sequence version replaced gi:41631222.

Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  CC Alzheimer's disease; autolimmune disease (e.g. systemic lugus (erythematosus, rheumatoid arthritis, insulin-dependent diabetes mellitus) (c) imperiod or lymphoid cell disorders (e.g. anaemia and thrombocytopaemia) (c) wounds, ulcers, burns; bone disorders (e.g. osteoporosis, osteoarthritis); mechanical and traumatic disorders (e.g. stroke, head (c) traumal; lung or liver fibrosis; reperfusion injury in various tissues; (c) bacterial, viral or fungal infections; allergic conditions such as (c) cancer and tumours; and inflammatory diseases (e.g. septic shock, Crohn's (e) disease, anaphylaxis). The protein may be used to inhibit the growth, (c) infection or function of infectious agents such as bacteria, fungi, (c) viruses, or to effect bodily characteristics, biorhythms or circadian (c) cycles of rhythms. The protein may also have (c) proliferation/differentiation, stem cell growth factor, haematopoiesis (c) proliferation/differentiation, stem cell growth factor, haematopoiesis (c) cactivities. The cDNA sequences of the invention are useful for expressing recombinant protein for analysis. The present sequence represents a novel human cDNA sequence of the invention, this sequence is an expressed condition of the invention are useful for expressing conditions.

   Tang TY,
   This invention relates to the cDNA sequences encoding an isolated novel human polypeptide. The protein encoded by the mucleic acid of the invention is useful for treating central and peripheral nervous system diseases (e.g. peripheral neuropathy, Huntington's disease, amyotrophic lateral sclerosis), neurodegenerative diseases (e.g. Parkinson's disease,
  Novel polypeptide useful for treating neurodegenerative diseases, my or lymphoid cell disorders, bone disorders, mechanical and traumatic disorders, coagulation disorders, and inflammatory diseases.

   The invention describes an isolated nucleic acid molecule (I) encoding a CC metalloprotease (MP-1). (I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an aberrant glutamate transport or motor neuron disorder, such as CC amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like CC condition. The compositions and methods are also useful for diagnosing, CC prognosticating, treating, ameliorating and/or treating disorders CC associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell caplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, CC or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, Huntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. Alzheimer's disease; CC and renal diseases and immune disorders (e.g. Alzheimer's disease or Parkinson's disease). This sequence represents a CC Alzheimer's disease or Parkinson's disease). This sequence represents a metabloprotease MP1 polynucleotide

  Pred. No.:
   The present sequence encodes human O-sialoglycoproteinase-like protein (OSGPLP). The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the OSGPLP protein; and (5) the use of the OSGPLP polynucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment
   O-sialogycoproteinase-like protein and encoding polynucleotide, useful for diagnosing, preventing and treating related diseases.

CC metalloprotease (MP-1). (I) is useful for preventing, treating, or cc ameliorating a medical condition, particularly an immune disorder, an cc aberrant glutamate transport or motor neuron disorder, such as cc amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like cc condition. The compositions and methods are also useful for diagnosing, cc prognosticating, treating, ameliorating and/or treating disorders (CC associated with MP-1 activity, e.g. diabetes, cancer, reproductive (CC disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, cc or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Huntington's disease or Tourette syndrome), liver cand renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis (CC or sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic (Alzheimer's disease or Parkinson's disease). This sequence represents a cc metalloprotease MP1 polynucleotide

The invention relates to an isolated polypeptide comprising: any of 28 CC sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acid sequence, 94% identical to a sequence CC of 703 or 267 amino acids, 96% identical to a sequence of 414 amino CC acids, or 97% identical to a sequence of 422 amino acids, all given in CC the specification; or a biologically active or immunogenic fragment of CC in diagnosing, treating and preventing diseases or conditions associated CC with the decreased expression of protein modification and maintenance CC molecules (PMOD), such as cell proliferative diseases (e.g. cancer, CC allergies), neurological disorders (e.g. stroke, Parkinson's disease, CC epilepsy), gastrointestinal (e.g. ulcer, cirrhosis), reproductive (e.g. cendometriosis), developmental, versicle trafficking disorders, and CC infections (e.g. bacterial, viral, parasitic, protozocal). These are also CC useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of PMOD. The PMOD or its or antagonist of the polypeptides, or in altering the expression of the activity of the polypeptides. The microarray is useful in monitoring CC measuring protein.protein interactions, drug-target interactions, and CC encoding a human PMOD protein of the invention

   The invention describes isolated 38650, 28472, 5495, 65507, 81588 and CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The CS 38550 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding recoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises are comprises as equence encoding adenosine CC sequences that encode a human seven transmembrane domain (7TM). The CC 38550, 28472, 5495, 65507, 81588 and 14354 comprise CC sequences are useful for diagnosing, preventing or treating a subject CC with or at risk of developing a disorder, e.g. cancer or aberrant CC cellular proliferation and/or differentiation (e.g. breast, ovarian, CC prostate, colon or lung cancer), immune disorders, heart disorders, CC cardiovascular disorders, endothelial disorders, heart disorders, CC cardiovascular disorders, brain disorders, pain and metabolic disorders, CC liver disorders or platelet disorders, pain and metabolic disorders, CC liver disorders or platelet disorders, autoimmune disorders, CC ischaemia, Hodgkin's disease, autoimmune disorders, CC ischaemia, heart disease, Crohn's disease, Grave's disease, Kawasaki CC syndrome, Raynaud's disease, aneurysm, cerebral ischaemia, peripheral cc carchexia or diabetes. This sequence encodes the novel human glycoprotease CC Cachexia or diabetes. This sequence encodes the novel human glycoprotease CC Cachexia or diabetes. This sequence encodes the novel human glycoprotease

  The present invention relates to novel human secretory or membrane proteins (ADA54712-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

  The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is that of a human soft tissue sarcoma within the specification per se but was submitted in CD format by the inventor.
   Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging
  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess

  This invention relates to a novel method for predicting gene potential by associating nucleic acid sequences of unknown function with particular sub-population profiles. Specifically, it refers to classifying an unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete sub-population where it is expressed. The present invention describes methods for predicting the lineage commitment of genes associated with the self-renewing haematopoietic (blood) stem cells (HSCs), as well as the nonself renewing multipotent progenitors (MPPs), common lymphoid progenitors (CLPs) and common myeloid progenitors (MPPs), which are collectively referred to as bone marrow stem cells populations. As such, these methods can be used to identify associated multiplineage affiliated genes and hence the underlying molecular mechanisms in physiological haematopoietic development. This polynucleotide sequence is DNA associated with a murine

  CC This invention relates to a novel method for predicting gene potential by CC associating nucleic acid sequences of unknown function with particular CC sub-population profiles. Specifically, it refers to classifying an CC unknown multi-lineage affiliated gene by collecting hybridisation data to develop a gene expression map, in order to determine the discrete sub-CC compulation where it is expressed. The present invention describes methods CC population where it is expressed. The present invention describes methods CC renewing haematopoietic (blood) stem cells (HSCs), as well as the non-CC self renewing multipotent progenitors (MPPs), common lymphoid progenitors (CLPs) and common myeloid progenitors (CMPs), which are collectively CC referred to as bone marrow stem cells populations. As such, these methods CC can be used to identify associated multi-lineage affiliated genes and CC can be used to identify associated multi-lineage affiliated genes and CC development. This polynucleotide sequence is DNA associated with a murine CC MPP sub population of cells of the invention.

Listing first 45 summaries
  Searched:
   Title:
Perfect score:
  Run on:
  OM protein - protein search, using sw model
   Total number of hits satisfying chosen parameters:
  Scoring table:
  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: Eye; Vector: pSPORT1; Neural retina tissue
was dissected from two 80 year old donors with no observed
eye disease. 100ug of total RNA was used for library
construction. A directionally cloned cDNA library in the
pSPORT1 vector (Life Technologies) was constructed at
Bioserve Biotechnology (Laurel MD) essentially following
the protocols of the SuperScript Plasmid System full
details of which are contained in the manufacturer's
Instruction manual (http://www.lifetech.com/). First
strand synthesis was carried out using a Not I
   [5'-pGACTAGTTCTAGATCGCGAGCGGCCC(T)15-3']. EST analysis
was performed on the unamplified library at the NIH
Intramural Sequencing Center (NISC)."

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
   For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSOBAI035ZE07_CS03317_1&c=1240.r

  1 LeuLeuAlaLeuValGlnGlyValSerAspPheLeuLeuLeuGlyLysSerLeuAspIle
   Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 66 Row: e Column: 10
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 21312463
This clone has the following problem: frame shifted.

Location/Qualifiers
